E-mail: turgunbaev56@mail.ru

The present study is aimed at studying the main problems of the formation and development of the management system in the agro-industrial complex in modern conditions.

To identify the main directions and trends in the development of modern management of the agro-industrial complex. Tasks - to determine the approaches to justification and choice to a market-based management method that provides freedom to producer and consumer, pricing, demand and supply formation and greater responsibility for ensuring economic efficiency and social development. The methods of managing the creation of material and spiritual goods, the activities of the state in ensuring justice, protecting people on their development path and in their livelihoods are considered. In the agro-industrial complex, the current management trend can be divided into two groups: one of them relates to the trend taking place in the government, the essence of which is to regulate the development of the agro-industrial complex by the state, the second group is associated with tendencies of management in the agro-industrial complex itself.

*Key words:* efficiency, market management method, state regulation of the economy, credit policy, agro-industrial complex, agrarian policy, corporate governance.

Kazan (Volga region) Federal University  
18, Kremlin str., Kazan, Republic of Tatarstan, 420008, Russia  
E-mail: hafiwka@mail.ru

The article is devoted to the analysis of the number of taxpayers who are registered with the tax authorities of Russia. In particular, a comparative analysis is carried out on the number of taxpayers who are registered with the tax authorities and the amounts of administered revenues in the Volga and North Caucasus Federal Districts. It is concluded that the tax authorities have different levels of workload. In this article we carry out a comparative analysis of the number of taxpayers who are registered with the territorial bodies of the Federal Tax Service. On the example of the two federal districts, a comparative analysis of the number of taxpayers who are registered with the territorial bodies of the Federal Tax Service and the amounts of administered revenues in two federal districts is carried out.

*Key words:* tax authorities, taxpayers, registration, administration, congestion, workload.

## **INFORMATION SPACE IN THE MANAGEMENT SYSTEM OF CONSTRUCTION INDUSTRY ENTERPRISES**

© 2017 Antsiferova Anna Igorevna  
Lobachevsky Nizhny Novgorod State University  
23, Gagarin prospect, Nizhny Novgorod, 603950, Russia  
E-mail: antsiferovaanna@yandex.ru

The relevance of the study due to the fact that business entities of the construction industry, carrying out economic activities, publish information not only about its activities but also about their property and about their results. Thus they form a specific area of economic space, which can be defined as the information field (space). In the literature information space in the construction industry is currently poorly studied by Russian specialists, which determines the necessity of research conducted in the framework of this article. The object of study is the control system of the construction industry. The subject of the research information space in the management system of construction industry enterprises. Information space construction companies is a complex interactive data sets, therefore there is a need to study the organization and formation of unified information space in the construction, since the area in the industry remains little studied until today. The article deals with the study of information space in the construction industry and identifies its role in the enterprise management system. The features of construction that affect the information space of enterprises.

*Key words:* construction, information space, information, principles of forming of registration of space data array.
